

# Car Wash Kiosk

The integrated solution that drives profit at the wash.

## Integration means easier management and greater accountability

- The car wash kiosk uses G-SITE's existing Gilbarco POS network connection. So there's no need for a separate modem, phone lines, or extra monthly network fees that are required with other car wash payment systems. Gilbarco's integrated system lowers the ongoing cost of ownership by eliminating the second network requirement.
- Accepts all major oil credit cards, debit cards, and cash cards that are accepted by the major oil network.
- Accepts contactless payment at the car wash, which may help your site qualify for the Exxon Mobil Brand Incentive Program (BIP).
- Consolidates reporting of all washes and upgrades sold (at the dispenser, POS, or wash entrance) into a single report for easier management.
- Provides greater accountability of money added to or removed from car wash kiosk by documenting these events on the Gilbarco POS log.
- Provides layered security that includes physical deterrents and barriers at the car wash kiosk, as well as alerts on the Gilbarco POS screen inside the store.
- Based on the familiar CRIND customer interface and hardware used in Gilbarco Encore gasoline dispensers.

- Unlike other payment terminal manufacturers, Gilbarco's Warranty covers more than just parts - it also includes labor and travel! Read our warranty for details.

## More ways to pay increases sales

Now you can increase sales and customer convenience by automating the payment process at the car wash entrance. Because the kiosk uses standard CRIND technology, you can offer consumers more convenient payment choices at the car wash entrance:

- Credit/debit, including major oil branded cards and Driver Cash
- Bills (\$1, \$5, \$10 standard)
- Quarters
- Codes
- RFID (depending on POS application)
- Contactless smart card coming soon

## Drive more profits

With customers now able to use credit, debit, or cashless RFID, they are no longer limited to cash on hand. So your customers are more likely to make last-minute upgrades or additional impulse purchases.

The Automated Attendant system sells and redeems car wash specials and discounted washes to help facilitate customer loyalty. It works together with the Gilbarco® POS System, to promote your marketing programs by redeeming local or fleet account washes.

Interfaces with  
Gilbarco® Point of Sale Systems

## Kiosk—Help build loyalty while increasing sales!

### Voice prompting helps customers get started

An optional built-in proximity sensor knows when a car pulls up and greets the customer with a friendly voice prompt. Simple instructions tell customers each step to take to make their car wash and payment selections.

### Proven technology

Gilbarco CRIND® technology is used in thousands of dispensers all over the world for consumer payment processing. This same technology and experience in outdoor payment processing can be put to work for you to increase profits at the wash.

### 24-hour sales professional

Based on your POS application, you can display your own merchandising information to prompt customers to make additional purchases at the wash or inside the store. The kiosk provides instructions and helps encourage "buy-up" sales to more higher-margin product offerings.

### Gilbarco® scalable solutions

Gilbarco end-to-end scalable solutions include point of sale, forecourt, and car wash entry. By choosing a Gilbarco POS with CPC, the Kiosk can be used in sites with other manufacturers' dispensers.

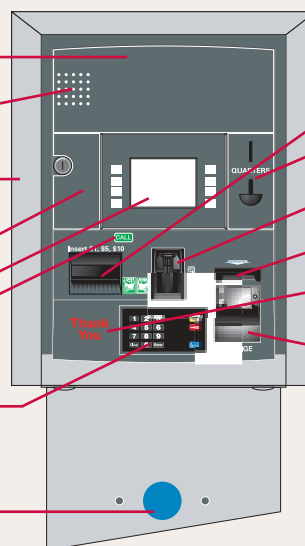

Gilbarco POS systems work seamlessly with back office applications for even more complete control and reporting over total site sales.

### World-class service and support

Gilbarco® products and systems are serviced and supported by Gilbarco certified technicians and contractors. With a network of over 400 service companies in North America, you can be assured of continued service and support.

### Features

- Large branding area
- Voice prompt greeting
- Stainless steel exterior protects against environmental and car wash hazards
- Same ATM-style interface as dispensers
- Graphical screen with softkeys
- Call for help button
- Keypad within ADA range for code entry or PIN
- Proximity sensor alerts when car is present at car wash entrance to initiate voice greeting

### Convenient Payment Methods

- Cash (\$1, \$5, \$10)
- Coins (quarters) acceptance
- Credit/Debit/Cash card
- Receipt printer and holder
- RFID Cashless Payment (within ADA range)
- Changeback cup
