

PCI DSS Certified Secure Cloud Services

INVENCO CLOUD SERVICES

Access a range of online services that save you money, enhance your customers' experience and let you scale your business like never before. Not only can you connect your Outdoor Payment Terminals (OPT) but a range of other devices for the forecourt and beyond! All you need is a broadband internet connection and you're ready to go.

TERMINAL MANAGEMENT

Traditionally the operational cost of managing a fleet of terminals is significant. ICS provides an essential toolkit to enable remote management activities at a fraction of the cost – and every Invenco OPT comes with cloud connection as standard.

EMV makes terminal software upgrades not only more frequent but more critical. With ICS, software upgrades have never been easier. Delivered to your terminals via the internet, with virtually zero downtime and no service call. Schedule upgrades at a quiet time of day to minimize disruption to customers.

Remote Key Injection in the field - Completely remove the costly requirement of terminals being shipped to a secure facility for key loading. Invenco's Remote Key Injection (RKI) service is fully certified and highly secure. Activate from your office or vehicle...and your first RKI is on us!

And you can do it offline - As some sites don't have an internet connection. So ICS also provides "offline" features, allowing you to download software updates and keys onto a drive for local installation at the site.

ENGAGE YOUR CUSTOMERS LIKE NEVER BEFORE

Deliver video, animations and graphics to your OPTs with the push of a button. Every unit on your site can simultaneously display the same messaging and be changed depending on the time of day ("morning coffee anyone?"), weather ("it's hot – how about an ice cream"), or loyalty ("Hi Jim – the fries are on us").

But it's not Invenco content you're displaying – it's yours. Our open platform enables you to connect third party media and loyalty schemes with minimal effort. Let your marketers loose! Customers love the fact you deliver relevant content that really talks to them, in a language they understand, to make a self-service transaction not just easy – but actually - fun.

SCALE YOUR BUSINESS - SEAMLESSLY

One of the best things about ICS is its inherent ability to scale. You get real time business intelligence, across all of your operation. It gives you decision making insights you can't get any other way. Invenco Asset Management – lets you track uptime, enable proactive maintenance and schedule upgrades – plus know exactly where units are located. There's comprehensive reporting so you can monitor transactions, throughput and addons. Plus, a web-based prompt authoring feature – giving you full control over what is playing on the screens on your forecourt.

INVENCO CLOUD SERVICES

Invenco Cloud Services (ICS) uniquely enables retailers to: manage their network of devices, lower overall operational costs and manage device uptime, drive brand and promotional activity across all their stores. There really is nothing else like it!

UNDERSTAND THE INVENCO DIFFERENCE

Invenco is a global provider of revolutionary self-service payment technology and secure customer engagement solutions. With a strong presence in the petroleum retail vertical, Invenco's product lines include G6 and G7 Outdoor Payment Terminals, iNFX retail micro-services (including electronic payment server), cloud services and Invenco Link, a high-speed Ethernet enabling device. In 2018 Invenco introduced i2, the world's first outdoor EMV as a service, to help US fuel retailers avoid the EMV liability shift without the burden of a large upfront investment. Invenco has deployed over 100,000 EMV payment terminals engaging millions of customers every day. Invenco is headquartered in Auckland, New Zealand and operates offices in the U.S., Canada, Malaysia and the UK.
