

Mag Plus In-Tank Probe Installation Kits - End of Life Notification

7 July 2022

Float Kits

Gilbarco Veeder-Root is committed to providing the highest quality products and services to our customers. As the world leader in the development of fueling system technology, we view product End of Life (EOL) as part of the natural cycle that drives technology evolution.

Therefore, **effective immediately** we are obsoleting:

- All 3" float kits
- 2" float kits with cable lengths 10' and 20'
- 4" float kits with cable lengths 10' and 20'

Due to lower demand of these installation kits, it is no longer feasible to support these going forward.

0.38LPH Mag Plus Probes

Transition Details

For customers currently using a 3" float kit, we recommend transitioning to a 4" float kit

Mag Plus Installation Kits will come standard with a 5' cable. If a longer cable is required, it must be purchased separately.

See the Product Transition Information section for more information.

Important Notes

The 4" float is the global standard for new sites due to the larger surface area of the float providing improved 0.38LPH and 0.76LPH Static in-Tank leak testing via SLD or CSLD and Mag Plus 0.38LPH Probes

The 2" Probe Installation kit is required for tanks that only have 2" or 3" access

If a 10' or 20' probe cable is required, the cable may be purchased as a spare part.

Thank You

Gilbarco Veeder-Root is committed to providing the highest quality products and services to our customers. We wish to thank you for your highly valued business and hope to continue our relationship in the future.
