

INSITE360

Fuel Suite

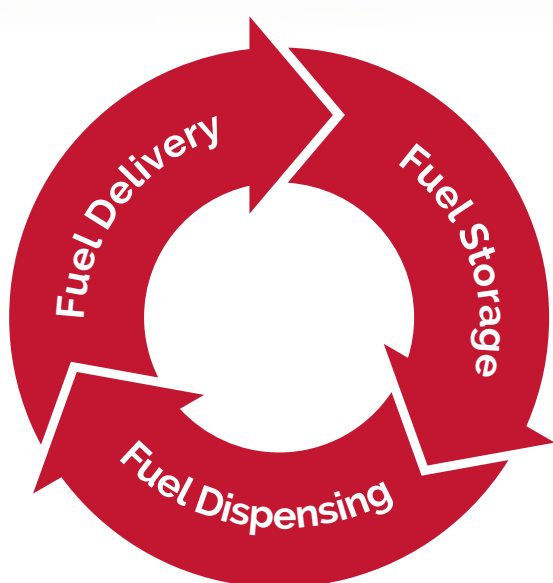

The wetstock management solution in the cloud

- ✓ Maximise profitability
- ✓ Save time
- ✓ Build sustainability
- ✓ Achieve peace of mind

360° view of your wetstock from delivery to dispenser with Insite360's solution in the cloud.

QuickChart - the foundation to success

Insite360 uses QuickChart high-resolution cloud calibration to ensure tank calibration is best-in-class. Without accurate tank charts, tight reconciliation can never be achieved and issues can be masked or detected too late. QuickChart provides precision with speed to solve this fundamental problem.

Drive sustainable cost savings

The two big enemies of forecourt profitability are over-dispensing meters giving fuel away and dispensers out of action limiting sales and damaging customer loyalty. Insite360 can identify meter drift by nozzle, allowing more cost-effective meter checks and tangible cost savings. Deteriorating flow rates are identified early, maximising uptime through pro-active intervention.

Maximise your investment

With Insite360, you can get even more benefit from your Veeder-Root TLS gauge.

Maximise your existing hardware investment by adding Insite360 service for the ultimate control of your most valuable asset.

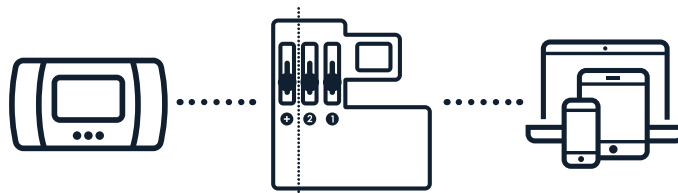

Meet obligations without stress

Environmental protection and risk management are a must for petrol station operators, both to comply with legislation and give customers confidence in your brand. Insite360 will detect discrepancies within minutes of occurrence as you trade and retrospectively analyse data to spot developing loss trends.

Peace of mind 24/7

Insite360 safeguards your enterprise from all sources of loss around the clock – including theft, leaks, over-dispensing and short deliveries and run-outs. Unacceptable variances are identified, root-caused and resolved for you, by us.

Insite360 Fuel Suite

***Advanced Variance Analysis**

A wetstock partnership you can depend on

Insite360 is a partnership. You are provided with an online dashboard and reporting tool to support daily business management anytime, anywhere. In the background we constantly monitor your wetstock, investigate issues and escalate alarms:

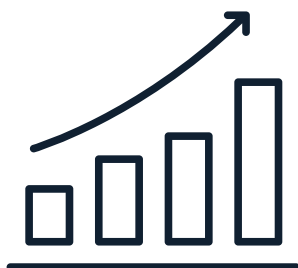

What We Provide

- ✓ Interactive online dashboard
- ✓ Comprehensive network and site reports
- ✓ Overview with drill-down to site detail
- ✓ Status alerts to highlight potential problems
- ✓ Notification of exceptions and actions
- ✓ Recommendations for cost savings
- ✓ Improved ATG calibration

The Value We Add

- ✓ Collect, store and analyse site data
- ✓ Calibrate tanks quickly and accurately
- ✓ Monitor variances, analyse and understand root causes
- ✓ Produce regular certified tank and line tests
- ✓ Contact you with issues requiring action
- ✓ Identify cost saving opportunities with ROI
- ✓ Remote equipment diagnostics

What's the payback?

Insite360 reduces variance significantly

Much of this is usually the result of better data and accounting. But even if just 0.05% of the improvement is financially recoverable, it represents around €2000 real saving every year on a typical site!

The best wetstock management solution for all fuel retailers

For large networks.
For single sites.
