

The most complete
and reliable
Point of Sale System.

The most advanced
business platform
for your Gas Station.

Platino

Point of Sale System

With Platino, take the control of your service station, from the back office to the forecourt. Rely on the most complete, most supported management system in the market. Easy to use in any of its multiple platforms (island terminals, administrative PCs, or setting & control sites), and with the service station manager in mind, today and in the future.

We offer you an easily adaptable software, which enables you to control

your invoicing and to define your business configuration by yourself. The user-friendly interface enables you to use an icon-setting, to add the corporate image, and to reduce the attendants' training time, as well as the customers' attendance time.

Easy Adaptation – Control Your Invoicing – User-Friendly Interface – Your Business Settings Defined by Yourself.

Fourcourt - POS Mid Range

- > Simplified operation without requiring a PC, using countertop type terminals.
- > Online connection with pumps
- > Billing Wet & Dry
- > Sale Receipt, Refund and Returns

- > Management of Categories, Customers, Current Accounts.
- > Issue of wide range of Reports.
- > Management of Differentiated price lists and Promotions.
- > Management of Users, Cashiers, Attendants. Passwords and Roles.

Interface Management

XML interface for central or corporate management systems (third party BO), which enables an ordered, standard export of data, so they can be easily captured in the central systems for decision-making.

Only output interfaces, which will be enabled at the customer's request.

You need to be a Gilbarco harmonized partner to be entitled to perform this adaptation.

Input Interfaces (From BO)

- Customers
- Products
- Categories
- Price changes
- Differentiated price lists
- Taxes

Output Interfaces Concepts (Towards BO)

- Sales transactions
- Paid-in
- Paid-out
- Dispensing
