

LIGO-FORECOURT MANAGEMENT SYSTEM

BRINGING CUTTING EDGE FORECOURT MANAGEMENT SOFTWARE TO YOUR BUSINESS - WELCOME TO LIGO FROM GILBARCO VEEDER-ROOT.

SIMPLICITY AND CONTROL

Consisting of Back Office (BOS), Point of Sale (POS) and reporting system, Ligo by Gilbarco Veeder-Root brings the simplicity of forecourt control with our dedicated user-interface. Embedded within our Doms PSS 5000, Ligo provides a complete wet stock management solution at site level for a wide range of businesses.

- > Access via enabled devices (desktop, tablet or smartphone)
- > Works on and off site allowing owners and managers to access information
- > Designed for international markets with multi-language support and currency configuration
- > Extensive exportable records and reporting
- > Configurable with third party applications to receive wet stock transaction data

WHAT IS INCLUDED?

LIGO consists of three main modules:

1. BOS – Back office system

- > Retail fuel service sites management covering all aspects of operations in real-time
- > Pricing and product catalogue
- > Dry and wet stock management
- > Employees and shift management
- > Customer management with local accounts

2. POS – Point Of Sale

- > Pump & Tank real time status & control
- > Dry item sales in the forecourt
- > Integrated part of the BOS

3. Portal and reporting

- > Access locally or remotely using any browser or mobile device
- > Real time view on station operations, sales, inventories, shifts
- > Easily generate report covering all activity aspects

BENEFIT TO YOUR BUSINESS

Improve operational efficiencies

Improve operational efficiencies and productivity with the simple to use LIGO. Staff can monitor site activity and carry out their tasks in the kiosk or from the back office without needing to physically access the forecourt.

Maximize revenues

Increase customer throughput with LIGO, easily and securely. It provides the reporting and functionality you need to quickly identify stock losses and makes configuration changes quickly and efficiently.

Improve user experience

With LIGO, you can configure a wide range of operating modes for the site. This allows you to provide a customized user experience, while still controlling your site and protecting your stock. For example, support for pre-pay and post-pay; night and day modes.

Report and track results

With the LIGO reporting engine you have access to a wealth of data to figure out the performance of your site. It provides to your employees comprehensive reports so they have the information they need to facilitate their daily results.

KEY FEATURES

Proven technology

With thousands of installations in the field, LIGO has proven itself repeatedly to be a reliable and robust wet-stock management application for managing diverse networks of retail petroleum sites.

Full wet & dry stock control

LIGO provides full control of wet-stock as well as dry-stock including deliveries, inventory & reconciliation.

Reporting engine

Comprehensive site reporting is available on historical transactions, site statistics and device events. Print those data out or export it into a variety of formats.

Intuitive user interfaces

We know that the secret to success is timely response to events on site, whether it is your cashier monitoring pump activity or quickly making changes to grade prices. We have ensured that the user interfaces in LIGO are simple and intuitive, minimizing training time and allowing you to access features quickly.

Scalable to C-Store POS

When your network includes large C-Stores, LIGO can be accompanied with a C-Store POS from the same application family.

REPORT FACILITIES

LIGO provides a wide range of reports including:

- > Attendant sales report
- > Attendant sales summary reports
- > Pump wise sales report
- > Tank inventory report
- > Stock reconciliation report
- > Shifts report
- > Alarm report
- > Event log report
- > Fuel sales report trend
- > Custom reports
- > Delivery report
